

Northeast Michigan Marine Surveys

Client Information

The survey is a written report of the results from visual inspection of the observable surfaces in the boat, including essential equipment, for evidence of defects, damage, failure, or structural faults. A survey is not a guarantee that such problems do not exist even if no evidence of them is found, because they can easily be hidden from detection behind solid surfaces.

Why are you having a survey done?

What concerns do you have about the boat?

Any known history of the boat?

Total number of boats you have ever purchased: _____

Number of years boating experience: _____

Home Telephone: _____ - _____ - _____
